Re: Village of Sauget, Illinois  
Storm Water Study, Project No. 7313-87-1

Gentlemen:

Our office has been requested by the Village of Sauget, Illinois to perform a comprehensive storm water study on the existing combined sanitary and storm water system within the Village.

We are studying the effects of treating the entire combined flow of storm water and processed waste to analyze the hydrology of the existing piping network.

In our attempt to model this piping network, it is necessary to obtain from each of the industries in the Village current layouts of the sanitary and/or storm water piping networks as well as storm water drainage area maps. Thus, we hereby request this information from your files and emphasize that providing detailed and current information on your system will allow our office to better assess the problems which may occur in the piping network in your vicinity.

If you have any questions, please do not hesitate to call.

Sincerely,

  
Joseph K. Crawford

Subject: Sewer Emergency

As we discussed on the phone today, we will be plugging the cross-connection between the two sewer lines running east and west along Old Queeny Ave on the north and south side of the road. See the attached sketch. The sandbags which will be used to plug the connection will have a rope attached to them in the event you have to open the connection to prevent flooding of your area.

Flooding could occur because we are temporarily pumping the wastewater with portable pumps because of the stormwater construction project.

Please inform you foremen on the other shifts.

Call if you questions.
